Correction Note

Michael Emmett Brady*

In Brady, 1997, pp. 143-145, in the Note section, I erroneously identified as typographical errors three mathematical terms which, given Keynes's clearly stated restrictions are, in fact, correct. Thus, on the bottom line of p. 144, the term \(\frac{(s/n)^m}{(m+1)(n+2)}\) is correct. On p. 145, top four lines, \(\frac{(s/m)^n}{(s/n)^n}\) and \(\frac{(s/n)^m}{(s/n)^m}\) are correct.

There are four additional typographical errors in Keynes's *A Treatise on Probability* (TP), 1921 (1973) which were inadvertently omitted from Brady, 1997. On line thirteen (1921, p.357; 1973, p.390), the term \(\frac{(s/u)^n}{u}\) is a typographical error. It should appear as \(\frac{(s/m)^n}{m}\). On p.380, line four (p.414, line eight, 1973), 1921, the term "n" appears. This is a typographical error. Instead, the term should read as "x". On p. 28, line four of footnote one (p.30, 1973), 1921, the term

\[
\frac{(n+1)(n+2)}{(m+1)(m+2)}
\]

is a typographical error. In its place should be written

\[
\frac{(m+1)}{(m+2)}
\]

On line 3 of the same footnote, not "n instances", but "m instances".

The editors of the *CWJMK* are advised to add the following comment to this footnote: "The correct terms, and analysis of them appear in chapter 30 of the TP on pp. 376-377; specifically on line one of p. 377 (1921) ".
